

Case 1: Primary Survey

Scenario Overview:

You are on duty as part of a medical team at a large-scale music festival, there are roughly over 66,000 people in attendance and it is a warm summer's day in July with temperatures being around 28°C. You are being dispatched to a person who has collapsed and unresponsive with the cause of collapse being unknown.

Difficulty:

First Aider Easy

How the scenario should progress:

The first aider/clinician should carry out a Primary survey followed by taking the vitals signs of the patient, then the first aider/clinician should proceed to come up with a clinical management plan and appropriate patient care pathway. 1. This scenario can be run by a solo First aider/clinician or by 2 First aiders/clinicians. 2. To make it more realistic to real world applications you may wish to use equipment, props and moulage. 3. Estimated scenario time: 10-15 minutes ~ Please modify as you see fit to necessarily meet your needs- for example gender/age/names.

Actor Tips:

Be dead weight and do NOT help or assist the First aider/clinician in any way possible. you should remain unresponsive until the scenario has ended.

Patient 1:

Name: Unknown **Age:** 20 **Sex:** Male

Medication:

N/A

Allergies:

N/A

Past medical/family/social history:

N/A

Findings on examination:

you find that there are no apparent life threats to the patient ABC, the patient is stable but unresponsive with no injuries.

Possible treatment from first aiders:

~ you should follow your local policy, guidelines and scope of practice for all scenarios~
